Please amend the Abstract as follows:

DISPLAY DEVICE WITH A FOCUS BUOY FACILITY

Abstract

Data processing system comprising at least a processing unit executing

simultaneously a number of application programs, a memory for storing the

5   application programs, a display subsystem for displaying on a screen a plurality of

windows associated respectively with a plurality of application programs, each

window being able to overlay partially or totally one or several windows already

displayed on the screen, and a mouse for moving a cursor to a selected location of

the screen. The display subsystem ~~comprises first displaying means for displaying~~

10   displays a focus buoy associated with each window at the same time the window is

displayed, ~~a table in the memory for storing for each window~~ stores the coordinates

of the location at which the focus buoy is displayed ~~the buoy associated with the~~

~~window~~ in a table in the memory, and ~~second displaying means for displaying a~~

~~buoy~~ in response to simply shaking the mouse, displays the focus buoys at each

15   location defined in the table ~~in response to simply shaking of the mouse~~.
